

IN THE CLAIMS

Please amend the Claims in this application as follows:

What is claimed is:

1-15) (cancelled)

16) (currently amended) The adapter element system kit according to claim 47 wherein said at least one receiving adapter element comprises comprising a plurality of said receiving adapters adapter elements.

17) (currently amended) The adapter element system kit according to claim 16 wherein said at least one second container comprises comprising a plurality of said second containers.

18) (currently amended) The adapter element system kit according to claim 51 wherein said at least one second container comprises comprising a plurality of said second containers.

19) (currently amended) The adapter element system kit according to Claim 47 further comprising at least one plunger syringe.

20) (currently amended) The adapter element system kit according to Claim 19 wherein said at least one plunger syringe comprises -a- at least one catheter syringe with a capacity of about sixty cubic centimeters.

21) (currently amended) The adapter element system kit according to Claim 19 wherein said at least one plunger syringe further comprises at least one flexible tube.

22) (currently amended) The adapter element system kit according to Claim 21 wherein said at least one flexible tube is between about one-eighth inch diameter and about one-half inch diameter plastic flexible tubing.

23) (currently amended) The adapter element system kit according to Claim 17 further comprising a travel-bag structured and arranged to hold and portably transport said plurality of second containers, and said plurality of receiving adapters adapter elements.

24) (currently amended) The adapter element system kit according to Claim 17 wherein said plurality of second containers comprises:

- a) at least one second container comprising a first capacity; and
- b) at least one second container comprising a second capacity.

- 25) (currently amended) The adapter element system kit according to Claim 47 further comprising at least one o-ring structured and arranged to assist in providing a seal between said at least one receiving adapter element and said at least one second container.
- 26) (currently amended) The adapter element system kit according to Claim 51 wherein said at least one second container comprises at least one spout.
- 27) (currently amended) The adapter element system kit according to Claim 26 wherein said at least one spout comprises at least one non-spill valve.
- 28) (currently amended) The adapter element system kit according to Claim 26 further comprising at least one lanyard.
- 29) (currently amended) The adapter element system kit according to Claim 51 wherein said at least one second container comprises further comprising at least one flexible bag.
- 30) (currently amended) The adapter element system kit according to Claim 29 wherein said at least one flexible bag comprises at least one combination selected from the group consisting of:
- a) bottom-gusset and at least one side gusset,
 - b) bottom-gusset only, and
 - c) at least one side gusset with bottom-fold.
- 31) (currently amended) The adapter element system kit according to Claim 16 further comprising at least one set of instructions.
- 32) (currently amended) The adapter element system kit according to claim 17 wherein said plurality of second containers comprises a plurality of flexible squeeze-tubes.
- 33-46) (cancelled)

- 47) (currently amended) An adapter element system kit, for assisting pouring of a flowable substance from at least one first container comprising at least one first threaded opening having at least one adapter cap comprising at least one Yorker tip to at least one second container having at least one second threaded opening, comprising:
- a) at least one adapter cap comprising at least one Yorker tip;
 - b) wherein said at least one adapter cap is structured and arranged to connect to the at least one first threaded opening of the at least one first container;
 - c) at least one receiving adapter element comprising at least one access structured and arranged to flowably connect with the said at least one Yorker tip of such said at least one adapter cap; and
 - d) wherein said at least one receiving adapter comprises at least one threaded port structured and arranged to connect with the at least one second threaded opening of the at least one second container; and
 - e) the at least one second container;
 - f) wherein said at least one receiving adapter is structured and arranged so that the flowable substance may be transferred through such said at least one adapter cap connected to such said at least one receiving adapter element directly from the at least one first container to the at least one second container;
 - g) wherein said at least one second container comprises at least one flexible squeeze-tube.
- 48) (cancelled)
- 49) (cancelled)
- 50) (cancelled)
- 51) (cancelled)
- 52) (cancelled)
- 53) (currently amended) The adapter element system kit according to claim 51-47 wherein said at least one second container is smaller than the at least one first container.
- 54) (currently amended) The adapter element system kit according to claim 52-47 wherein said at least one flexible squeeze-tube is structured and arranged so that it can be folded to expel substantially all air from within such flexible squeeze-tube.

55) (currently amended) The adapter element system kit according to claim 51 47 further comprising at least one o-ring structured and arranged to assist in providing a seal between said at least one receiving adapter element cap and said at least one second threaded opening of the at least one second container.

56) (cancelled)

57) (currently amended) The adapter element system kit according to claim 51 47 wherin said at least one second container flexible squeeze-tube comprises:

- a) at least one empty flexible squeeze-tube body portion having at least one first end and at least one second end;
- b) wherein said at least one empty flexible squeeze-tube body portion is new and unused for containment;
- c) wherein said at least one first end comprises a reclosable access system wherin said reclosable access system, when closed, seals such at least one first open end; and
- d) wherein said at least one second end comprises a permanent "lincar" tube-type seal closure.

58-60) (cancelled)

61) (currently amended) The adapter element system kit according to Claim 51 47 wherein said at least one flexible squeeze-tube is structured and arranged so that it can be folded substantially flat second container comprises:

- a) at least one empty flexible squeeze tube;
- b) wherein said at least one empty flexible squeeze tube is new and unused for containment.
